

AeroOps — Customer Deck Variants

How to tailor the deck for each buyer. Each section names the workflows and outcomes to emphasize, the three hero screens to lead with, and a one-line value proposition. Feeds customer-specific variants of [DECK_CONTENT.md](#).

Part 61 Flight School

Buyer: owner-operator who flies, instructs, and runs the business — often the entire operations department.

Emphasize:

- **Adopt it in an afternoon** — no consultant, no back office, no manual.
- **Billing that happens by itself** — Hobbs/Tach closeout produces the invoice atomically; nothing closed goes unbilled.
- **"What needs me today?"** — the dashboard's Needs-Attention triage as the single morning glance.
- **"What did today make?"** — revenue and receivables visible before you leave.
- **Onboard the next CFI in minutes** — role-based access without an IT project.

Three hero screens: [dashboard.png](#) · [billing.png](#) · [schedule.png](#)

Value proposition: *Everything your school touches in one place — and billing that reconciles itself the moment a flight closes.*

Part 141 Flight School

Buyer: chief flight instructor / school operator accountable for an approved syllabus, stage checks, and FAA-auditable training records.

Emphasize:

- **The pipeline out of your head and into the system** — who's ready for a stage check, whose endorsements are missing, who's cleared to test.
- **Readiness with reasons** — every checkride-readiness answer shows its factors, not a bare yes/no.
- **Endorsements and currency on the record** — not the morning-of-checkride spreadsheet scramble.
- **Defensible records on demand** — an immutable audit trail under every training action for the FSDO conversation.
- **Instructor turnover survivable** — students and records don't get orphaned.

Three hero screens: [training.png](#) · [students.png](#) · [executive.png](#)

Value proposition: *Your training pipeline — readiness, endorsements, and checkride clearance — as an explained, auditable record instead of tribal knowledge.*

University Aviation Program

Buyer: collegiate program director running a degree program that flies — cohorts of students, a large fleet, and an accreditor who wants an audit trail.

Emphasize:

- **Accreditation-grade audit trails** — defensible records at every term boundary, without a week of prep.
- **Fleet utilization that survives a provost's scrutiny** — executive reporting with the reasons behind every number.
- **Scale that stays fast** — multi-tenant architecture built for hundreds of students and a large fleet.
- **Program-wide visibility** — executive and reports views across the operation.
- *Honest roadmap note:* cohort/term grouping depth and cross-location roll-up are on the roadmap (1.5) — position them as coming, not shipped.

Three hero screens: [executive.png](#) · [reports.png](#) · [training.png](#)

Value proposition: *A defensible, auditable system of record for a degree-scale flight program — where fleet utilization and training records withstand accreditation and a provost's review.*

Cross-variant guidance

- Keep the core narrative identical (Slides 1–5, 13, 20–24) — only the hero module slides and the closing emphasis change per buyer.
- Never present roadmap items as shipped; when a buyer's need touches a roadmap item (card payments, live METAR, cohort reporting, native mobile), name it as roadmap and pivot to the shipped capability that covers the need today.
- Lead every variant with **atomic dispatch** → **invoice** and **explainable by construction** — they are the two claims no incumbent can match.
