Part 61 Flight School

MISSION

One system. One truth.

Small aviation runs on whiteboards, dispatch binders, and five tools that don't talk to each other. AeroOps makes the connected version the easy version.

- The schedule doesn't know the airplane is grounded.
- The invoice doesn't know the flight closed.
- The chief instructor recalls checkride readiness from memory.

THE PROBLEM

Fragmentation is the enemy

Every seam between tools is where money and safety leak out.

Revenue leaks

Flights that closed but were never billed.

Airworthiness by memory

The overdue inspection no spreadsheet flagged.

Training opacity

Readiness as tribal knowledge, not a record.

Compliance anxiety

The FSDO conversation starts from recollection.

An operating system, not an app

Scheduling, dispatch, maintenance, training, and money as one continuous, auditable motion — what airlines have had for decades.

- One data model, not five products and a spreadsheet.
- Every computed answer carries its reasons.
- An immutable audit trail under every action.

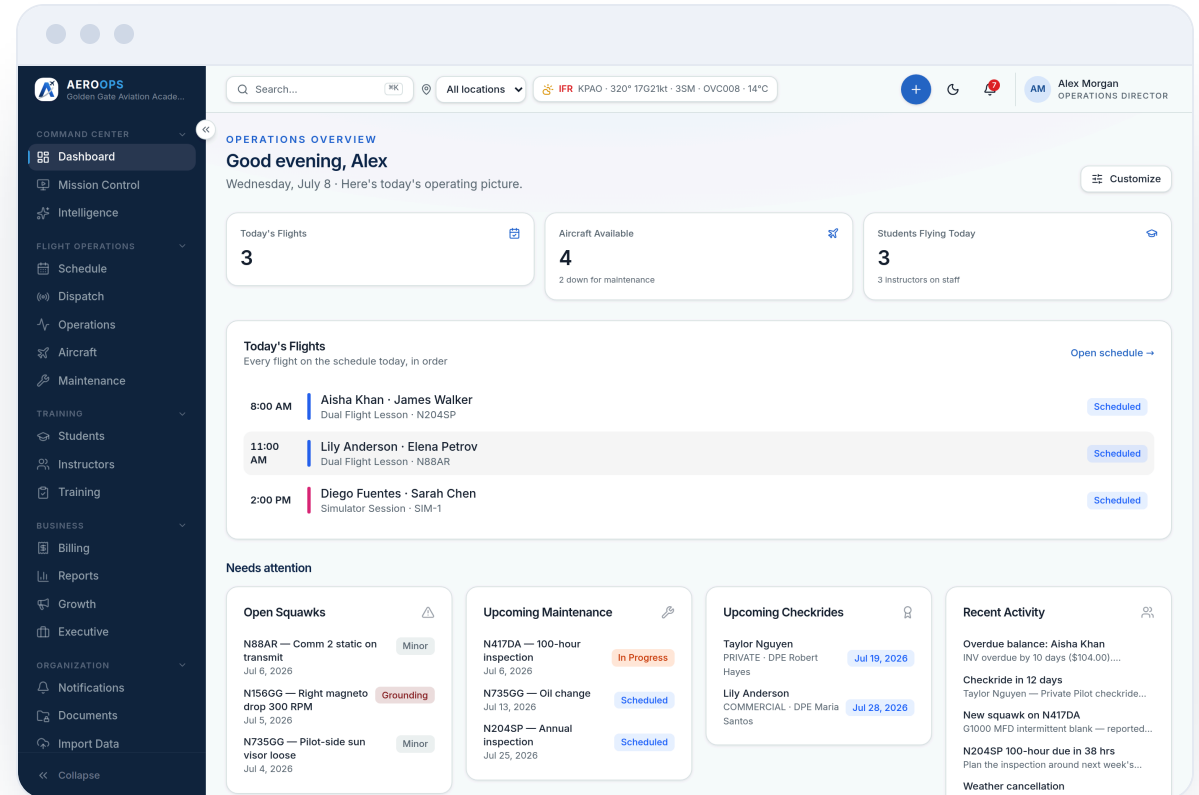

PLATFORM OVERVIEW

Everything the operation touches

One login. One picture. One record.

- Fly — Scheduling · Dispatch · Operations · Mission Control
- Maintain — Squawks · Work orders · Return-to-service · Parts
- Teach — Students · Instructors · Checkride readiness
- Bill — Invoices · Payments · Receivables
- Know — Reports · Executive view · Explainable insights

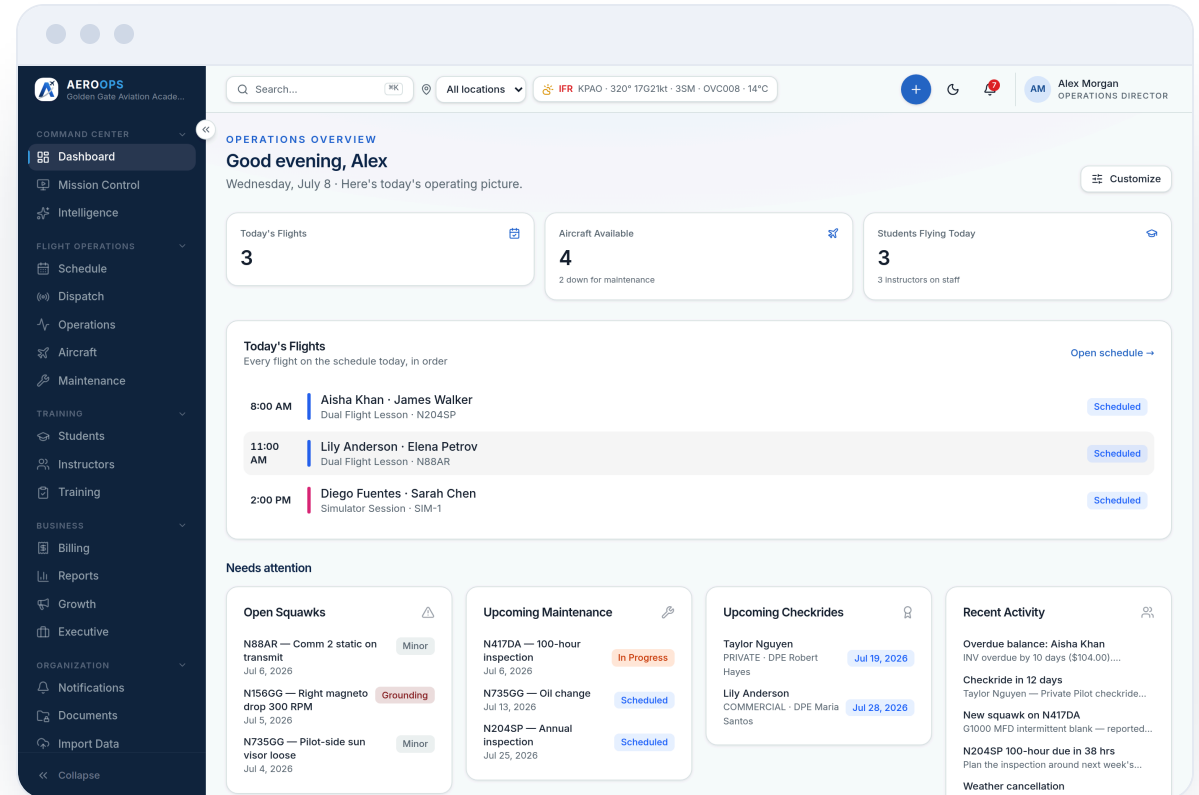

DASHBOARD

What needs me today

The morning triage, answered before the first click.

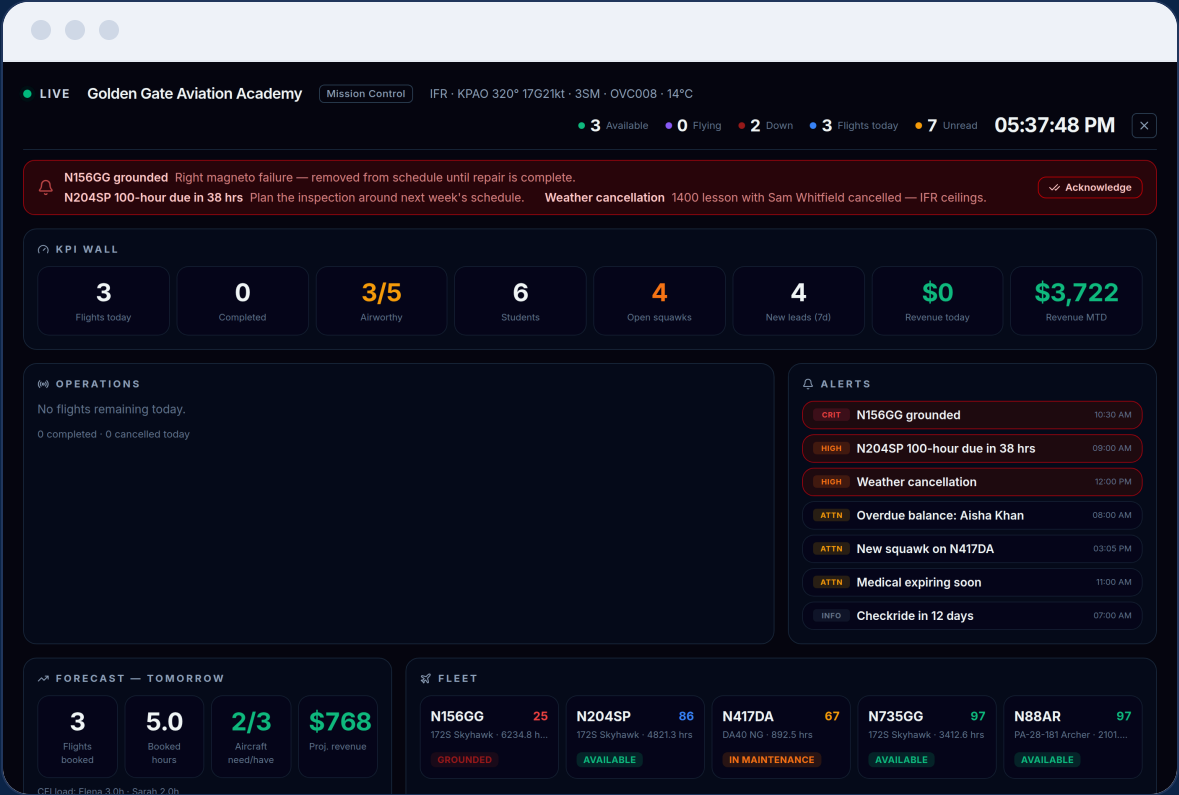

- Today's flights, at a glance.
- Needs Attention — squawks, inspections, checkrides, activity.
- Fleet status and weather for the active location.
- Personalized: every viewer sees only what their role should.

The operation on the wall

A live, full-screen operations picture for the front desk and the ops room.

- Real-time flight, fleet, and weather panels.
- The audit timeline as a first-class surface — not a log file.
- TV mode and scenes for the dispatch wall.

SCHEDULING

Book it once, everywhere

The schedule that knows the airplane, the instructor, and the student.

- Conflicts caught before they're saved.
- Aircraft, instructor, student, and resource on one axis.
- Grounded aircraft can't quietly stay on the schedule.

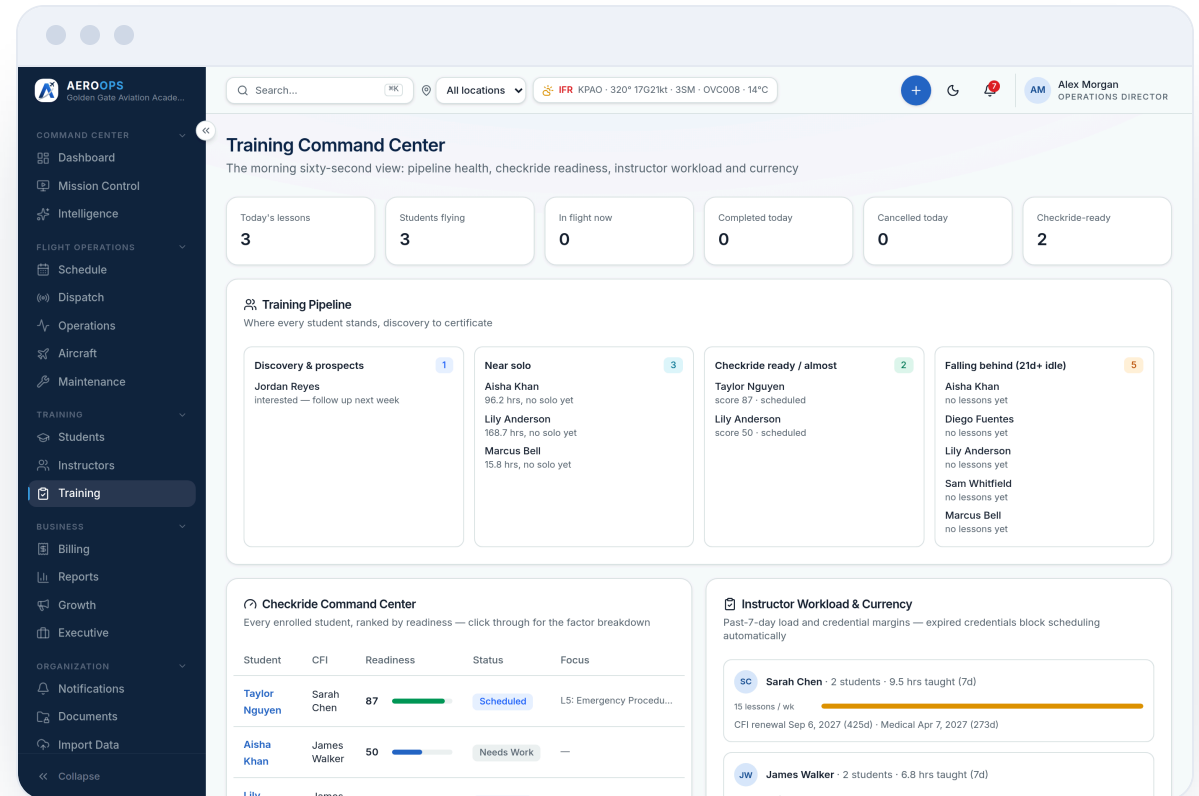

The screenshot displays the AEROOPS Scheduling interface. On the left is a dark sidebar with a navigation menu including: COMMAND CENTER (Dashboard, Mission Control, Intelligence), FLIGHT OPERATIONS (Schedule, Dispatch, Operations, Aircraft, Maintenance), TRAINING (Students, Instructors, Training), BUSINESS (Billing, Reports, Growth, Executive), and ORGANIZATION (Notifications, Documents, Import Data, Collapse). The main content area is titled 'Schedule' and includes a search bar, filters for 'All locations', 'All aircraft', and 'All instructors', and buttons for 'Apply filters', 'By aircraft', 'By instructor', and 'Quick schedule'. Below this is a timeline view for 'July 8, 2026' with tabs for 'Timeline', 'Day', 'Week', 'Month', and 'List'. The timeline grid shows slots from 6am to 8pm. Several aircraft are scheduled: N735GG (172S Skyhawk) from 6am-7am, N204SP (172S Skyhawk) from 8am-9am, N88AR (PA-28-181 Arc) from 10am-11am, N417DA (DA40 NG) from 12pm-1pm, N156GG (172S Skyhawk) from 2pm-3pm, and SIM-1 (FMX AATD) from 4pm-5pm. A red vertical line is at 5pm. Below the timeline is a 'Lesson Requests' section with two entries: 'Marcus Bell' (Dual Flight Lesson, 3:00 PM - 120 min) and 'Diego Fuentes' (Ground Lesson, 9:00 AM - 90 min). Each entry has buttons for 'Pending', 'Approve', 'Needs changes', and 'Reject'.

TRAINING

The training pipeline, in the system

Readiness with reasons — not reconstructed from memory.

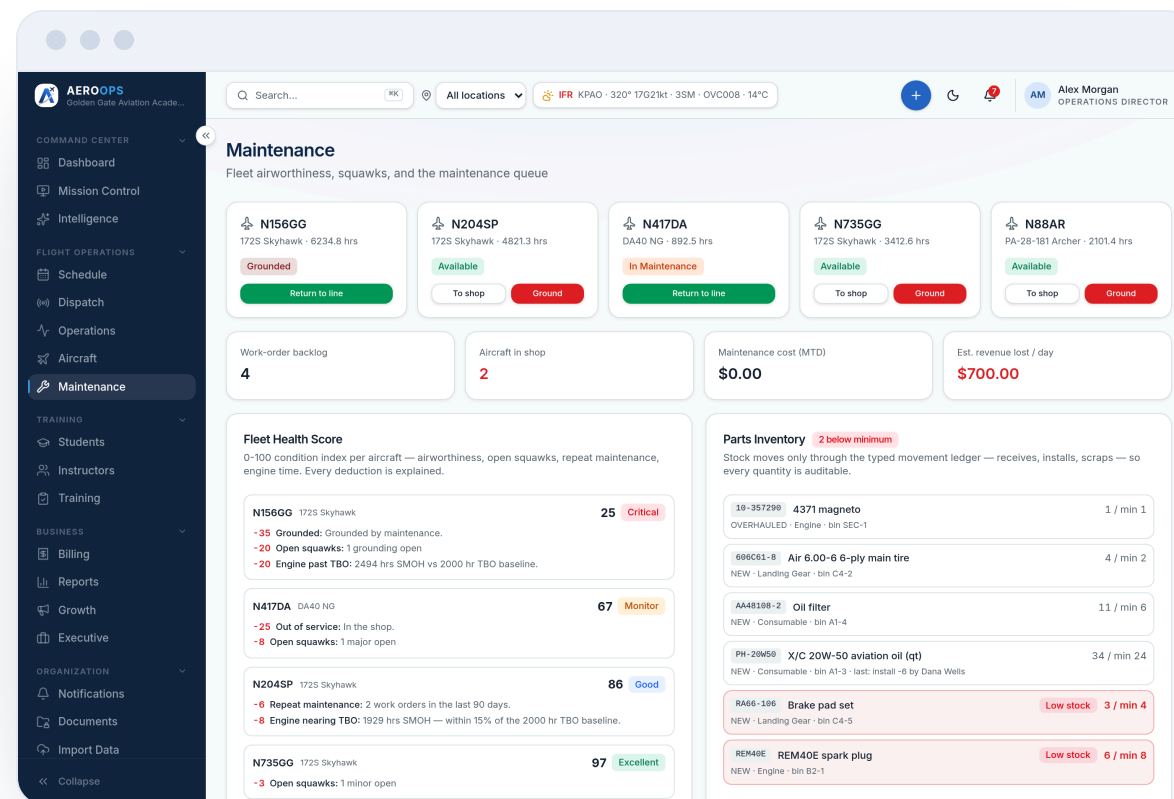

- Students, instructors, stage checks, and checkride queue in one place.
- Endorsements and currency on the record, not in a spreadsheet.
- Lesson records that follow the student through the syllabus.

Airworthiness the system enforces

Squawk → work order → return-to-service, with parts you can audit.

- Squawks ranked by airworthiness impact.
- Signed return-to-service on the record.
- Parts movement as a typed, traceable ledger.
- Ground an aircraft and see the blast radius.

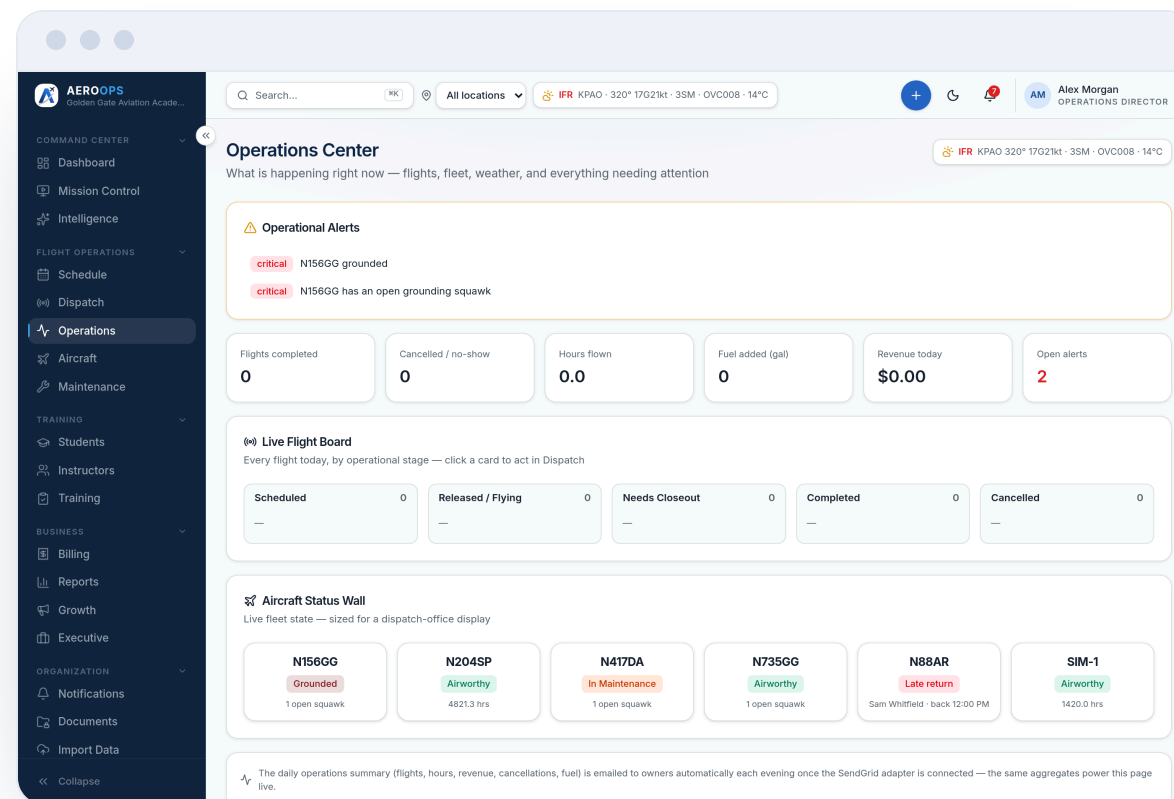

OPERATIONS

The day, in motion

Release, watch, resolve, close out — without phone-tag.

- Live releases and returns from one board.
- Status that's always truthful across schedule and maintenance.
- Conflicts and grounding impact surfaced before they bite.

BILLING

Money that reconciles itself

Invoices, payments, and receivables built into the operation — not bolted on.

- One invoice per flight, generated at closeout.
- Money is exact by construction (Decimal, never float).
- Receivables aging and payment records in the tenant.

Card processing on invoices is on the roadmap (Stripe adapter).

- Import Data

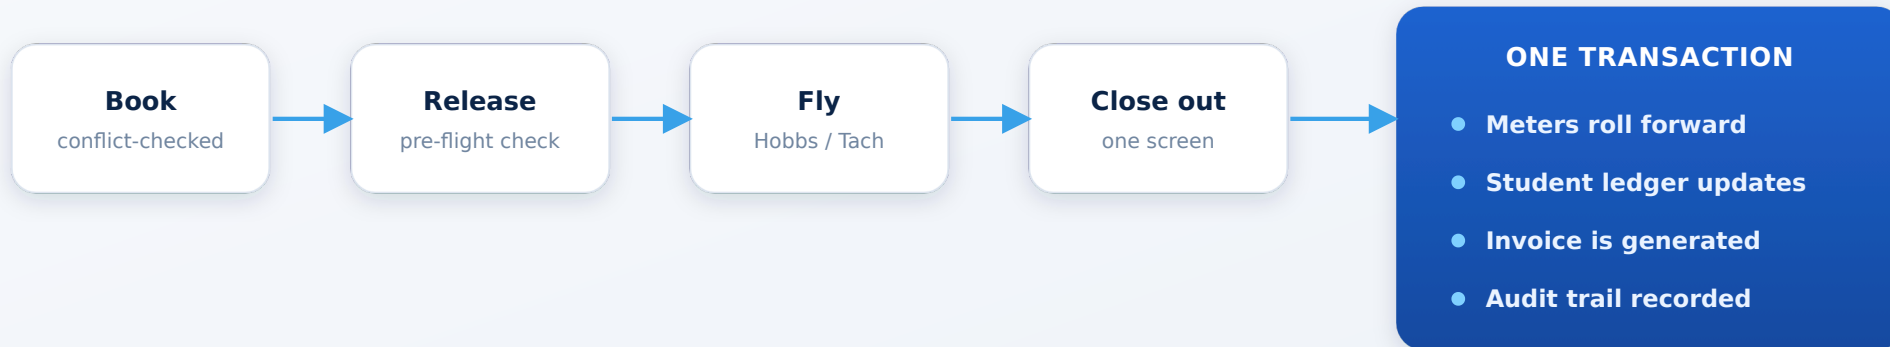

« Collapse

One motion. No leak.

The flight closes. The meters move. The invoice exists — atomically. If any step fails, none of it commits.

One motion, not five tools

Closing a flight moves the meters, the ledger, and the invoice — in a single transaction.

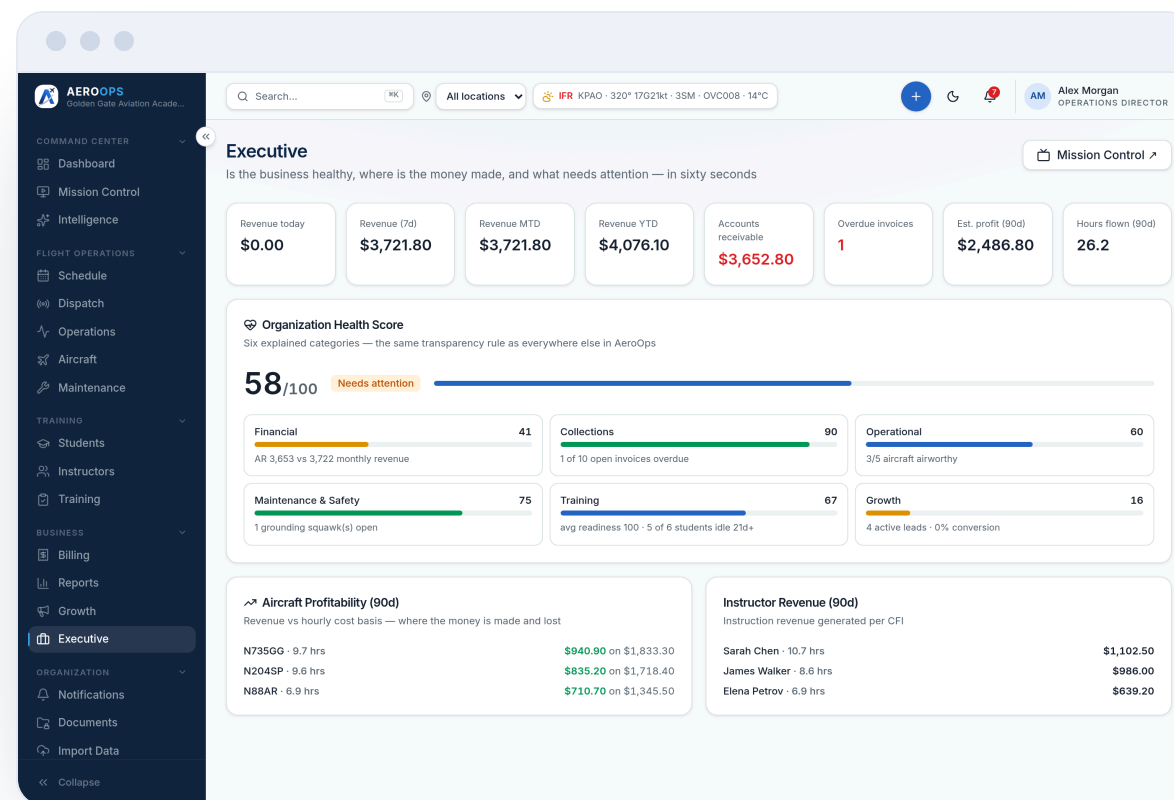

Revenue leakage becomes structurally impossible — a flight can't close without billing.

REPORTS

Numbers you can defend

Executive reporting with the reasons behind every figure.

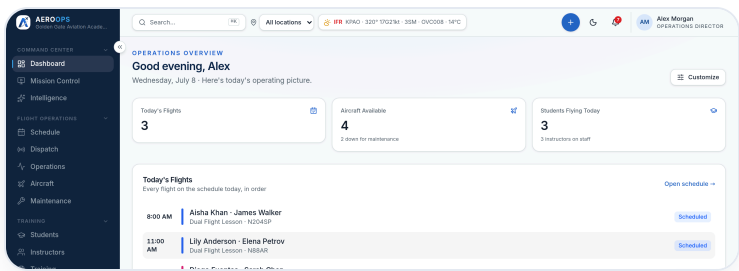

- Revenue, utilization, and instructor productivity.
- Executive view for the owner and the board.
- An immutable audit trail underneath every number.

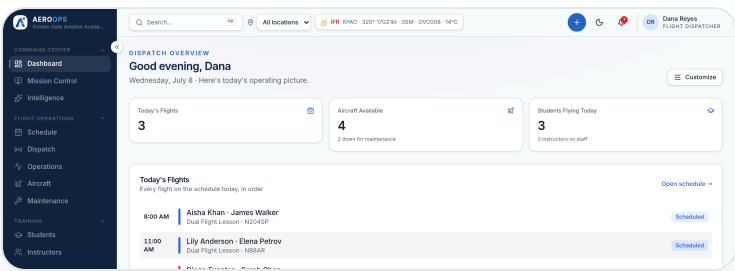

ROLE-BASED EXPERIENCE

One product. Every seat.

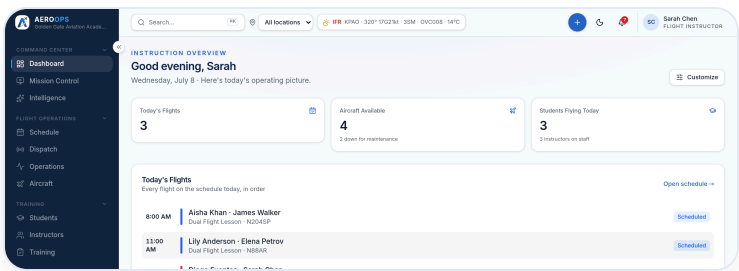

Personalized by permission — never hardcoded by title. No one sees data their role shouldn't.

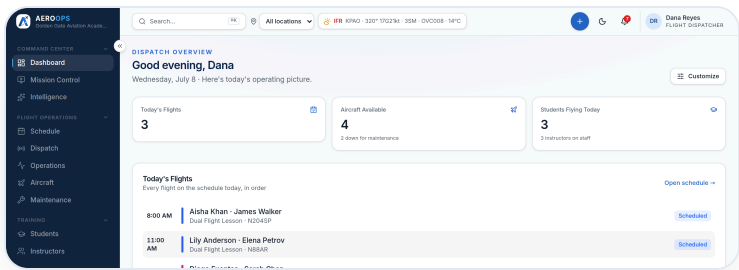

Account Owner

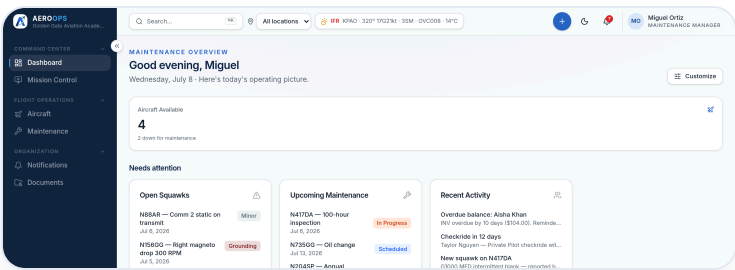

Operations Director

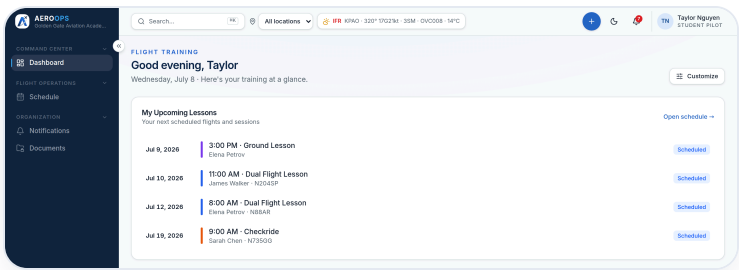

Chief / Flight Instructor

Flight Dispatcher

Maintenance Manager

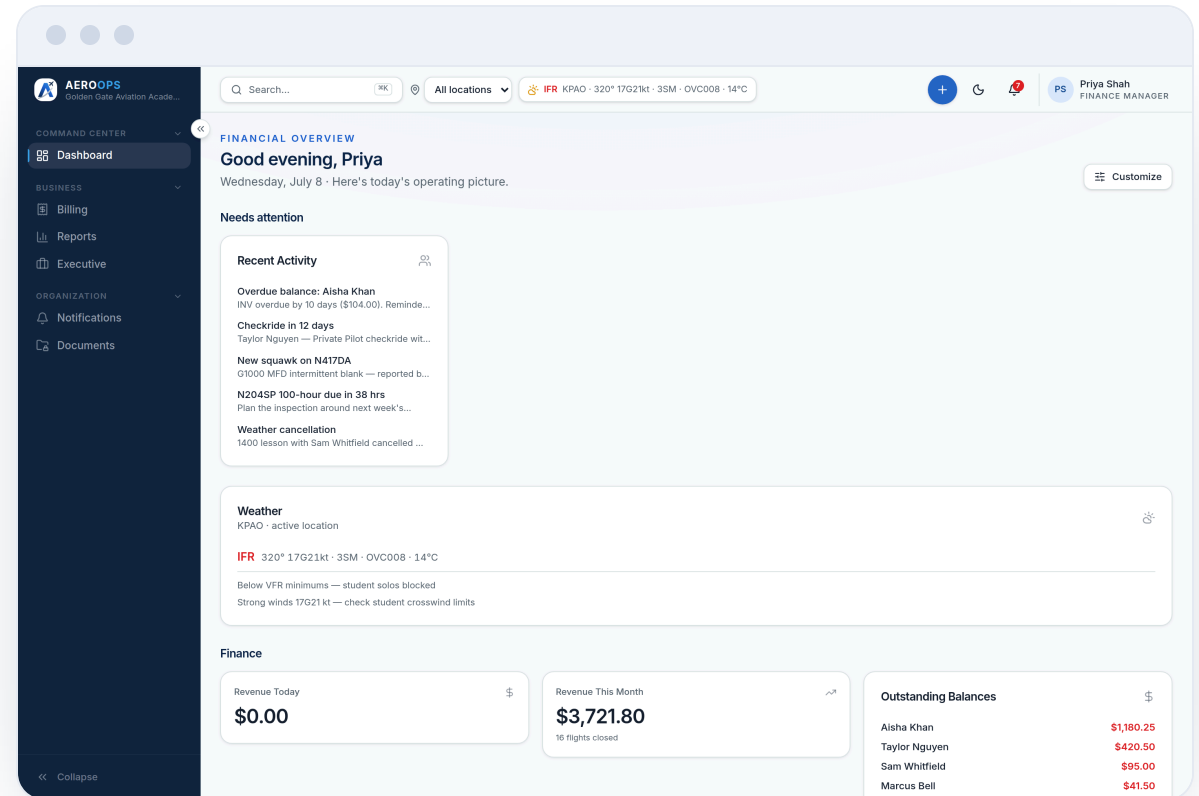

Student Pilot

CUSTOMIZATION

Fits your operation

Configure the product to the operation without a consultant.

- Toggle dashboard widgets per user.
- Role-driven navigation and custom-role templates (Registrar, Front Office, Safety Officer...).
- School branding, time zone, and multiple locations.

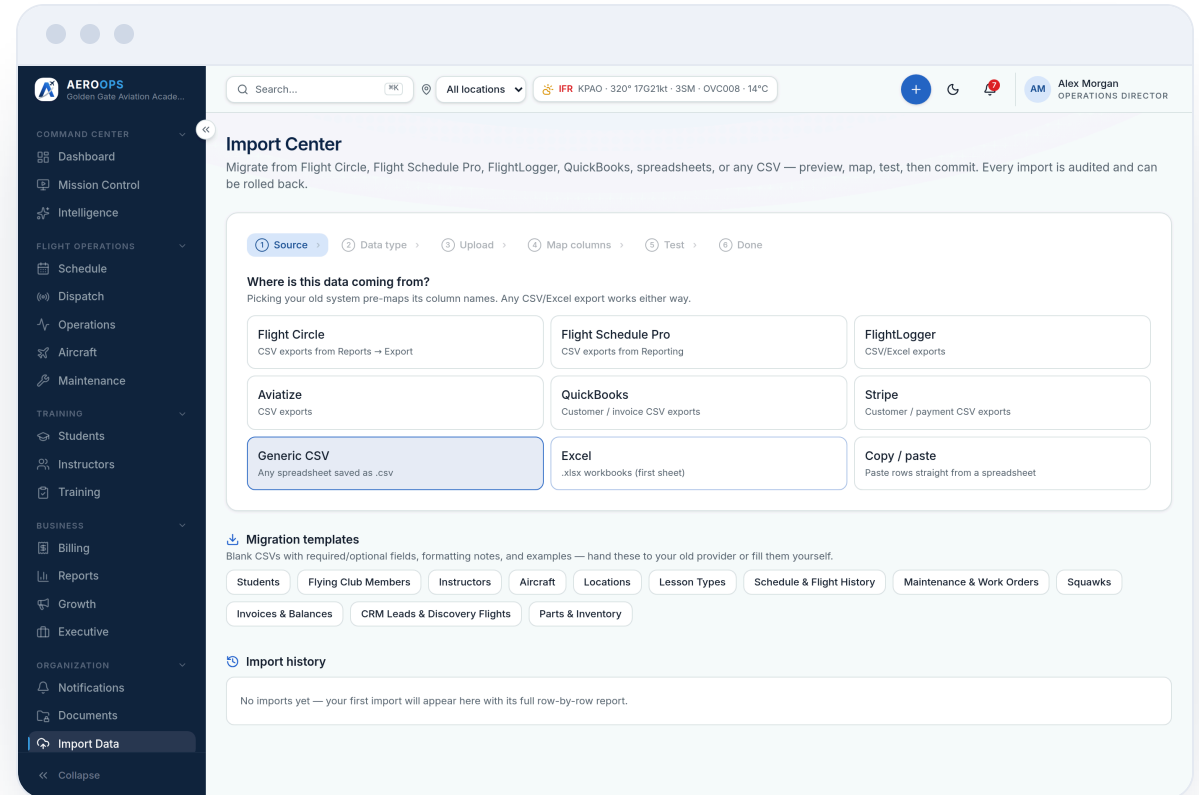

MIGRATION

Bring your data. Roll it back.

The Import Center is why switching isn't scary.

- Presets for Flight Circle, Flight Schedule Pro, FlightLogger, QuickBooks.
- Map → test (a real, rolled-back run) → commit → rollback manifest.
- Public API v1 and signed webhooks for what comes next.

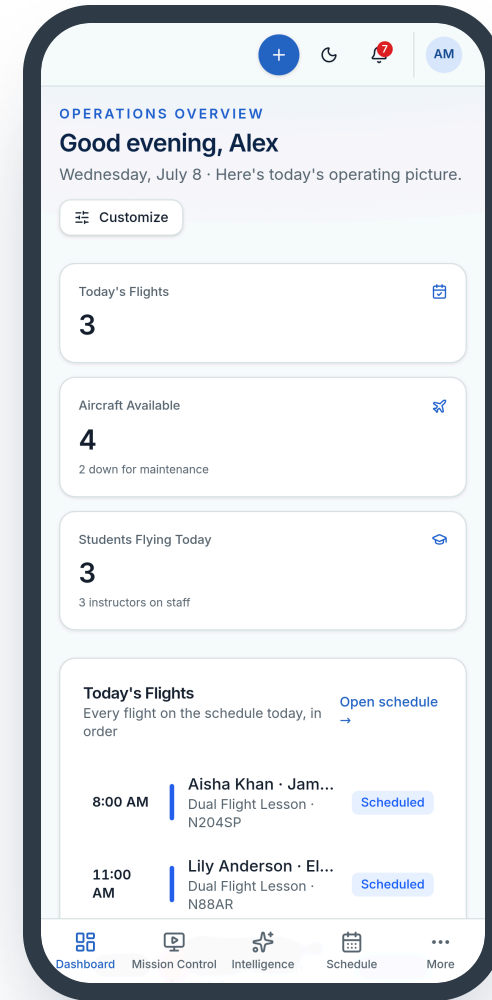

MOBILE

The operation in your pocket

A responsive, installable app — for the ramp, the desk, and the couch.

- Installable PWA: add to home screen, works on phone and tablet.
- Bottom navigation and full light/dark parity.
- Every role's view, sized for the device.

Installable PWA today; native app-store wrappers are on the roadmap.

Adopt it in an afternoon

Built for the owner who is also the operations department.

One place

No re-entering a flight into three systems.

Billing by itself

Invoices happen at closeout, automatically.

Know tonight

What today made, before you go home.

No overhead

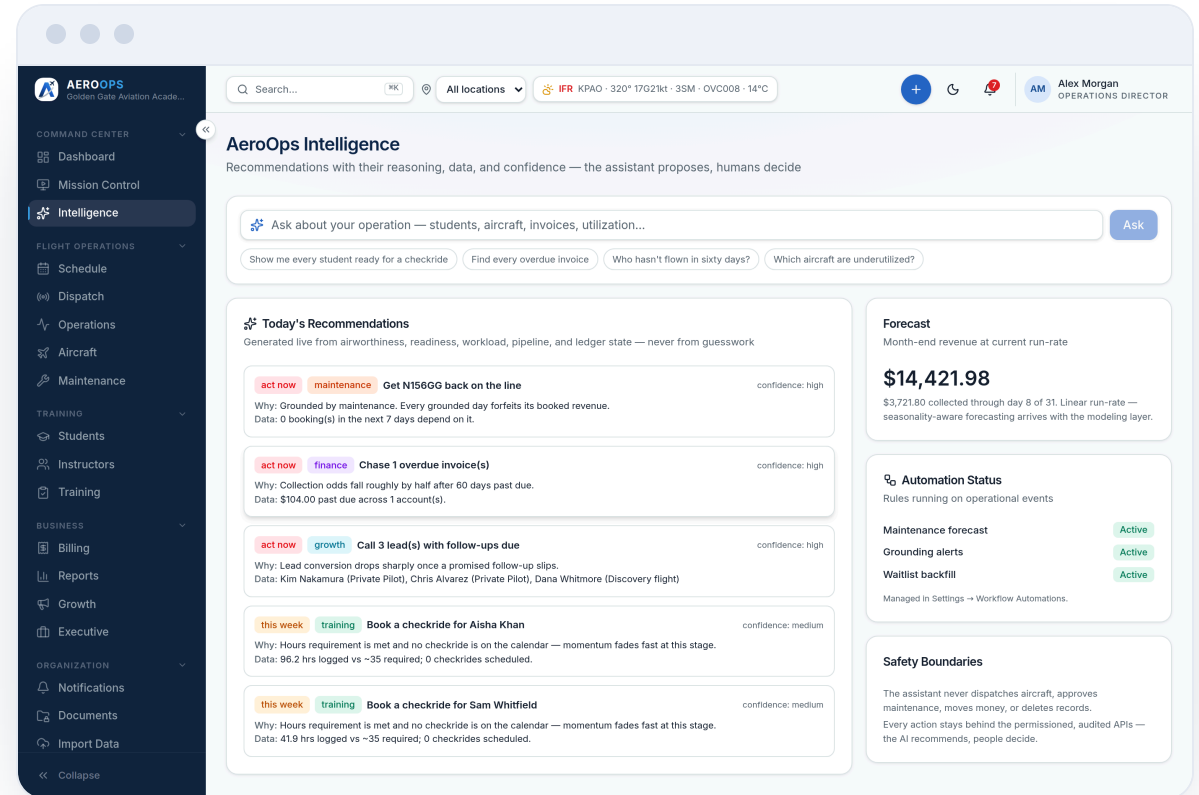

No manual, no consultant, no back office.

PROOF & TRUST

Explainable by construction

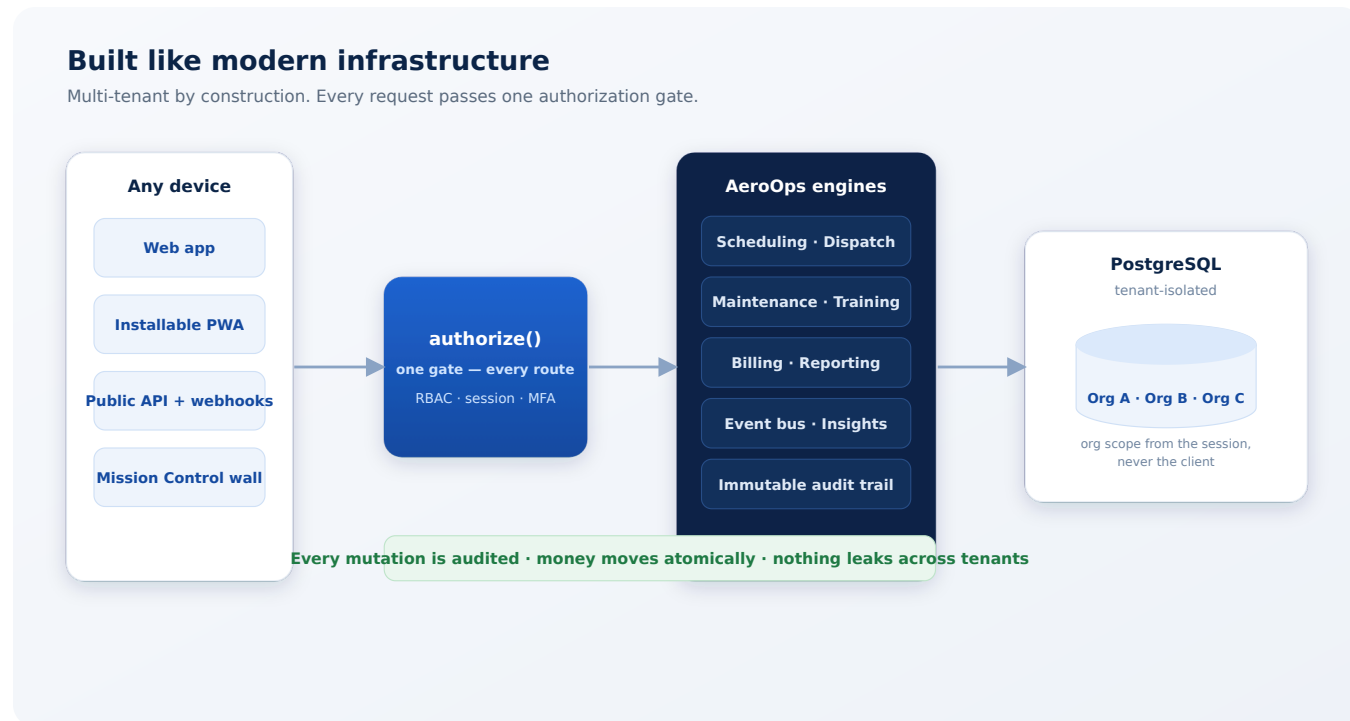

Trust is the product.

- Every conflict, readiness score, and insight shows its reasons.
- The audit trail is immutable — never rewritten, never skipped.
- AI advises; it never acts. Mutations require a permissioned human.
- Multi-tenant isolation enforced from the session, never the client.

Enterprise-grade underneath

Multi-tenant by construction, one authorization gate, an immutable audit trail, and an atomic money path.

The seams are already built

We're plugging adapters into existing seams.
Everything here is roadmap.

ROADMAP

Delivery

Email & SMS notifications, web push.

ROADMAP

Payments

Stripe subscriptions and card-on-invoice.

ROADMAP

Live weather

Real METAR/TAF (simulated today).

ROADMAP

Documents

Cloud file storage with signed URLs.

AERO
ROADMAP

Operational intelligence

Airworthiness forecasting, currency guards, live AI narration.

Priced for the operation you are

Modern SaaS economics — no consultant, no hostage fees.

Transparent

Per-aircraft / per-seat, published — not negotiated in the dark.

Self-serve

Onboard in an afternoon; a real import path out of any competitor.

Grows with you

Scale shouldn't punish you — pricing grows with the operation.

Transparent pricing — contact us.

 **N156GG grounded** Right magneto failure — removed from schedule until repair is complete.

N204SP 100-hour due in 38 hrs Plan the inspection around next week's schedule.

Weather cancellation 1400 lesson with Sam Whitfield cancelled — IFR ceilings.
