

AeroOps

The Operating System for Aviation

Scheduling, dispatch, maintenance, training, and money — one continuous, auditable motion. Run the operation, not the paperwork.

Why operators choose AeroOps

One system, one truth. Your schedule, your fleet, your students, your money, and your compliance live in one data model — not five tools and a spreadsheet that disagree with each other.

Money that reconciles itself. Dispatch closeout updates meters, ledger, and invoice in a single atomic transaction. A flight that closed cannot silently go unbilled.

Airworthiness the system enforces. Squawks ranked by impact, inspection countdowns that never surprise you, signed return-to-service, and traceable parts — so "is it airworthy?" is a fact, not a memory.

Explainable by construction. Every conflict, readiness score, and insight shows its reasons, over an immutable audit trail. Trust is the product.

What's inside

Scheduling	Dispatch & Operations	Mission Control
Maintenance & Parts	Training & Checkrides	Billing & Receivables
Reports & Executive	Role-Based Dashboards	Import Center
Public API & Webhooks	Mobile PWA	Explainable Insights

On the roadmap: email/SMS, Stripe payments, live METAR, cloud document storage, native mobile, and predictive intelligence — each plugging into seams already built.

Built to be trusted

Multi-tenant isolation · data-driven RBAC · immutable audit trail · atomic money path · import with one-click rollback. Adoptable by a six-aircraft school in an afternoon — no consultant, no back office required.
